

# PIC HAO 4 -

February 16, 2021 12:45 AM

## Program Design:

- everytime button is pressed, counter+=1.
- What if counter is already at last bit--->get it back to original ON state...0100 0000
- make it go back to bit 1.
- need to set RA 1:7 as output ports
- need to set RB 4:5 as input ports. Use data sheet!
- add a delay to counter unintentional presses
- make sure to counter HOLDS.

## Schematic:
